SOMMAIRE / SUMMARY**I - DOCUMENTS DE REFERENCE / REFERENCE DOCUMENTS :**

- Spécification / *Specification* : 317111
- Plans / *Drawings* : 317111-JLA-702-001 à/to 317111-JLA-703-057
- Code / *Code* : ASME IX – ASME VIII Division 1

II - CONTROLE DES SOUDURES / EXAMINATION OF WELDS

- Les types et repères de soudures sont spécifiés sur les schémas en pages 2 à 4.
-Item and type of weld see sketches folios 2 to 4.
- Les contrôles des soudures sont spécifiés sur le plan qualité et/ou les fiches de mode opératoire.
-Examinations of welds are specified on the quality plan and/or on the W.P.S.
- Procédures de contrôle suivant plan qualité / *test procedures according to ITP :*
- Critères d'acceptation / *Acceptance criteria* : ASME VIII Division 1.

III - FICHES DE MODE OPERATOIRE : / W.P.S. :

| Rep ou type de soudure <i>Item or type of weld</i> | Page / Folio WPS N° | Observations <i>Observations</i> | QMOS N° PQR N° |
|---|--------------------------------|--|---------------------------|

| A5-A6 | 12 32158-06 | Angle / TIG <i>Fillet weld / GTAW</i> | HPS 15-09 |

IV - REPARATION DES SOUDURES / WELD REPAIR

Toute réparation intéressant plus de 60% de la soudure sera traitée par une fiche de non-conformité.

Les autres défauts sont réparés suivant la procédure ci-dessous:

- Affouillement du défaut par meulage jusqu'à élimination complète du défaut.
- Ressuage de la zone affouillée pour s'assurer de l'élimination complète du défaut (ce ressuage ne fait pas l'objet d'un PV)
- Rechargement de la zone affouillée suivant la fiche de soudage initiale
- Reprise du (ou des) contrôle CND initial.

NB :

Un défaut réparé par un simple meulage ou par une simple goutte de soudure (comme sur les points d'arrêt par exemple) ne feront pas l'objet d'un PV de contrôle spécifique.

Les défauts réparés par affouillement et rechargement feront l'objet d'un PV de contrôle spécifique après réparation.

A nonconformance report must be issued for all repairs involving more than 60% of the weld.

All other defects must be repaired according to the following procedure:

- *Complete elimination of the defect by grinding*
- *Penetration testing of the grinded zone to ensure complete elimination (this penetrant test is not the subject of a report).*
- *Filling of the grinded zone according to the initial WPS.*
- *Repeat initial non-destructive test*

NB :

Any indication repaired only by grinding or only by a spot weld (as stop weld for example) will not be recorded.

Inspection for indications repaired by grinding and welding will be a specific record

V - CONTROLE VISUEL AVANT SOUDURE / VISUAL INSPECTION BEFORE WELDING

Le contrôle avant soudure est réalisé par le soudeur et porte sur les points suivants:

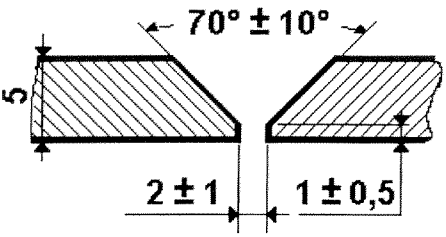

- Dégraissage et absence de corps étrangers sur les faces à souder
- Désalignement $\leq 1/4 t$ pour $t \leq 13$ mm, et ≤ 3 mm pour $t > 13$ mm
- Conformité géométrique au DMOS

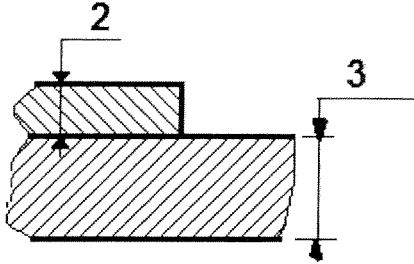

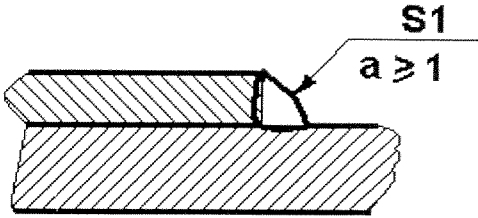

Visual inspection before welding is performed by the welder and must verify the following points:

- *Faces to be welded degreased and free of foreign matter*
- *Misalignment $\leq 1/4 t$ for $t \leq 13$ mm, and ≤ 3 mm for $t > 13$ mm*
- *Geometric conformance with the Welding Procedure Sheet (WPS)*

Liste prévisionnelle et non exhaustive des soudeurs potentiels.

Les rapports de qualifications soudeurs sont consultables pendant la fabrication

Les certificats de qualification des soudeurs ayant soudé seront fournis en fin de fabrication.

Forecast and non exhaustive list of potential welders.

The welder qualification reports are available during the manufacturing

Copies of WPQ effectively used will be provided at the end of manufacturing

Seul l'objet soumis à l'essai est concerné par ce rapport. L'accréditation de la section Essais du COFRAC atteste de la compétence des laboratoires pour les seuls essais convertis par l'accréditation. La reproduction de ce rapport d'essai n'est autorisée que sous sa forme intégrale. Il comporte 1 page.
This report concerns only the object being tested. No copyright can be granted without written approval of the laboratory. The accreditation attributed by the COFRAC Test Section attests for the only tests covered by the accreditation.
Prüfergebnisse beziehen sich ausschließlich auf die getesteten Proben bzw. Gegenstände. Eine Verfertigung des Berichts bedarf der schriftlichen Genehmigung des Berichts bearbeitenden Prüflabors. Die von COFRAC erteilte Akkreditierung bescheinigt die Kompetenz des Prüflaboratoriums nur für die speziell akkreditierten Prüfungen und Prüfverfahren.

Sept. 2001 soumis à l'essai. L'accréditation de la section Essais du COFRAC atteste de la compétence des laboratoires pour les soudures: convertis par rapport d'essai n'est autorisée que sous sa forme intégrale. Il comporte 1 page.
This report concerns only the object being tested. No copyright can be granted without written approval of the laboratory. The accreditation attributed by the COFRAC Test Section attests for the only tests covered by the accreditation.
Ergebnisse betreffen sich ausschließlich auf die getesteten Proben bzw. Gegenstände. Eine Verweigerung des Berichtes bedarf der schriftlichen Genehmigung des Prüflabors. Die von COFRAC erteilte Akkreditierung bescheinigt die Kompetenz des Prüflaboratoriums nur für die spezifisch akkreditierten Prüfungen und Prüfverfahren.

HYDROSTATIC TESTING**1. PURPOSE**

This instruction describes the final resistance test of pressure equipment or a part of it.

2. SCOPE

This instruction applies to both tests carried out at Ziemex S.A.S shop and tests carried out on assembling site, on pressure vessels made of:

- Stainless steel
- Aluminium
- Nickel alloys

3. REFERENCE DOCUMENTS

- List of manufacture and inspection operations
- Approved drawing
- Work order

4. PROCEDURE**4.1. Time for performance**

The time for performance of hydrostatic test is given on the list of manufacture and inspection operations. This test is usually done at the end of manufacture, but it can be done preventively on a part of pressure vessel before final assembly. This test is done before painting and insulation.

4.2. Position of equipment

The equipment will be installed so as to avoid damage to it and do not put the workers in danger. It is also to check for correct vent and drain of the equipment.

4.3. Closing of the equipment

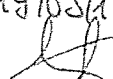

The equipment is completely sealed up to the purge and fill points. The valves for filling, pressurizing and gauges are installed. The closure of the blind flanges is performed with the bolts defined by the design office. There are regularly screwed up without exceeding the torque necessary to seal.

4.4. Filling equipment

The equipment is filled with demineralized water up to the vent points. A filter is added to the water supply.

4.5. Pressure gauges

Only calibrated gauges with a valid usage limit will be used. It is to check that the gauge has a scale such that the test pressure is between 1/4 and 3/4 of it. For vertical equipment, the pressure gauge is to be installed at highest point. If the reading during test becomes difficult or impossible, it may be placed at a lower position. It will then consider the static pressure of water.

HYDROSTATIC TESTING

4.6. Test pressure

The value of the hydraulic test pressure is given on the drawing, the list of manufacture and inspection operations and the hydraulic test certificate. It is calculated according to the formulas of the code, from the permitted maximum working pressure and it must be applied to the highest point of the equipment. If the pressure gauge is placed below, we will add 0.1 bar per meter water.

4.7. Pressurization

Prior to pressurization, the vents are closed. The water is brought by water main or by a pressurizing pump. The tightness of the blind flanges is checked at low pressure and bolts are possibly tightened. The pressure is regularly mounted up to the value of the test pressure.

4.8. Inspection

The inspection must be carried out by the inspector at least 1/2 hour and a maximum 1 hour after pressurization. The external walls must remain dry. In the presence of the inspector, the pressure will be mounted up to the value of the test pressure. During this test, all welds, valves, blind flanges, manholes, bolts will be inspected to detect a water leak, the deformation of the equipment will be checked and the fall of the pressure gauges will be observed.

4.9. Hydraulic test certificate

The satisfactory outcome of a hydraulic test is recorded on a certificate of hydraulic test. This certificate will be signed by the team leader and the manufacturing manager, and eventually the inspector. If the test is unsatisfactory, it will be repeated after sealing the leak.

4.10. Completion of the test

After completion of the hydraulic test, the pressure is lowered to 0.1 bar. Then the vents are opened or possibly a blind flange is removed in the upper section. The equipment is then emptied completely. The test gauge is removed and is delivered to the store.

5 ANNEX

Hydraulic test certificate.
